# BAKE AND BROIL ELEMENTS

Engineered to OEM specifications, ERP utilizes world-class manufacturers for Bake & Broil elements.

## Measurement Key for Elements

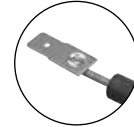

- A = Measurement between terminals
- B = Measurement between terminal end and mounting bracket
- C = Measurement between mounting bracket and end of element
- D = Measurement of element width
- E = Measurement between indentation of element and end of element

## Order No. ERB44K5009

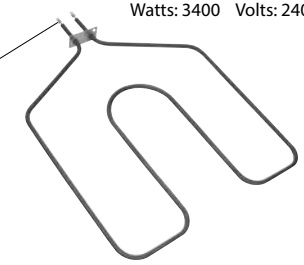

Watts: 3400 Volts: 240

- A = 1-1/2"
- B = 2-5/8"
- C = 15-5/8"
- D = 13-3/4"

.250" male terminal push-in connection

Also fits: GE #WB44K5009

## Order No. ERSM20

2+0 UNIVERSAL  
2 manual circuits for top burner ignition & no oven ignition circuit

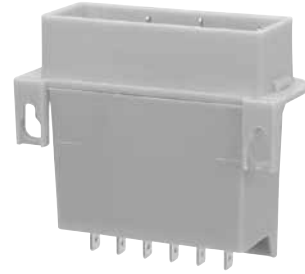

**UNIVERSAL  
3 in 1 terminal  
design**

Replaces any .110", .187" and .250" output terminal sizes

## Order No. ERSM21D

2+1 UNIVERSAL  
2 manual circuits for top burner ignition & 1 flame sensing circuit for automatic oven reignition

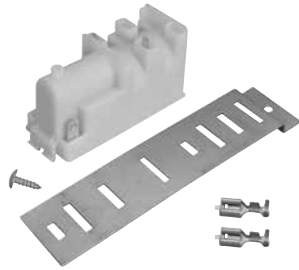

Replacement for Apco, Derlite, Harper Wyman, Invensys, Kigass, and RV 2+1 modules

Also fits:  
Brown 1801B142, GE WB20X93, Peerless 2353, Slattery 27040, Whirlpool 31829401, 4363560, R0703584

## Order No. ERSM27

2+0 UNIVERSAL  
2 manual circuits for top burner ignition & no oven ignition circuit

Replaces any .187" output terminal module

## Order No. ERSM40

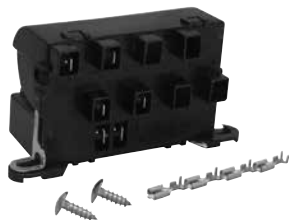

4+0 UNIVERSAL  
4 manual circuits for top burner ignition & no oven ignition circuit  
Mounting bracket included

Replaces any .110" output terminal module

## Order No. ERSM47

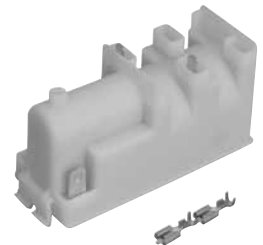

4+0 UNIVERSAL  
4 manual circuits for top burner ignition & no oven ignition circuit

Replaces any .187" output terminal module

## Order No. ER1801B178

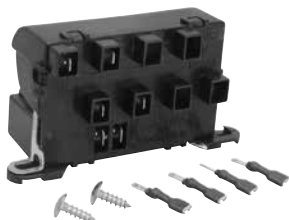

2+0  
2 manual circuits for top burner ignition & no oven ignition circuit

Also fits Brown #1801B178  
Invensys #07720-15, #U-67320-10

## Order No. ER1801B183

4+0  
4 manual circuits for top burner ignition & no oven ignition circuit

Also fits Brown #1801B183  
Invensys #46347071, #46328041

## Order No. ER1801B184

2+0  
2 manual circuits for top burner ignition & no oven ignition circuit

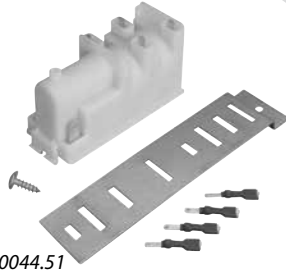

Also fits Brown #1801B184  
Invensys #26347071, #26328041-001

# MICROWAVE OVEN OPERATION

## How a Microwave Operates

The microwave oven produces RF energy in the form of Radio Waves that cycle 2450 million cycles per second. These MICRO-WAVES have 3 main characteristics. They can penetrate certain materials as if it wasn't even there, materials like glass, mica, paper and some plastics. Secondly, there are materials like metal that the microwaves cannot penetrate and basically just bounce off of. And thirdly, there are materials like FOOD that micro-waves do penetrate and basically are absorbed in the material.

The food absorbs the microwaves and the microwaves cause the molecules in the food to move rapidly creating friction between them which creates the heat that cooks the food. The microwaves only penetrate the outer portion of the food but the heat is conducted inwards to cook the food completely.

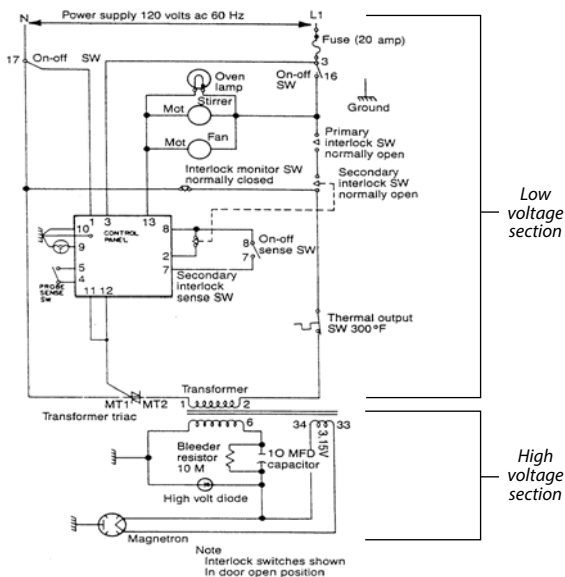

It is the MAGNETRON in the microwave oven that produces the microwaves. The magnetron needs approx. 4000 Volts to go into oscillation to generate the microwaves. The microwave oven has basically 2 sections, the low voltage section which actually controls the unit and the high voltage section whose components include the magnetron and the components that power up the magnetron. The high voltage transformer or the new style inverter is the component that separates the 2 sides.

The low voltage (control section) takes the 120 volts, passes it through all the safety devices like the interlock switches, thermal fuses and powers up the control device. On the older models the control device was the timer which told the triac to close and send power to the high voltage transformer; on the new units it is the PCB control board that performs that function. The fans, turntable motors and lights are also powered from the low voltage section.

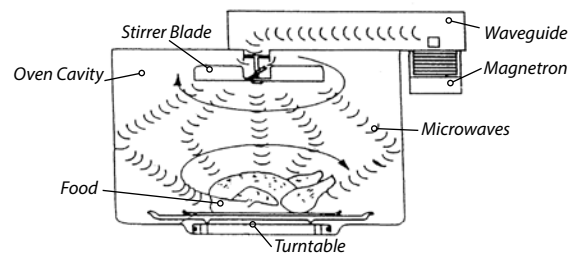

The high voltage section consists of the high voltage transformer, the doubling circuit and the magnetron. The transformer takes the 120 volts from the low voltage section and increases it to approx. 2000 volts and feeds it to the doubling circuit. The doubling circuit consists of the HV Capacitor and the HV diode. The HV diode converts the voltage to DC and the capacitor discharges the 2000 volts and sends it to the magnetron. This adds to the 2000 volts that comes direct from the HV transformer and gives the magnetron the 4000 Volts needed to go into oscillation. On some of the new models this is all done by the inverter board.

The microwaves leave the magnetron through its antenna and goes into the waveguide where they bounce around the metal waveguide and into the oven cavity until they are absorbed by the food. Some models have stirrer blades to direct the microwaves randomly in the cavity to reduce uneven heating. Some models use a rotating tray to reduce uneven heating. The glass tray is used so microwaves can enter the bottom of the food for complete penetration.

Typical Microwave Oven Schematic

Microwave Cooking

1. Microwaves produced by magnetron enters the metal waveguide.
2. Microwaves travel down the waveguide and are stirred up by the stirrer blade as they enter the oven cavity.
3. As they enter the metal oven cavity they bounce around until they are absorbed into food.
4. Microwaves absorbed in food set the molecules in such a frenzied motion that they heat through friction.

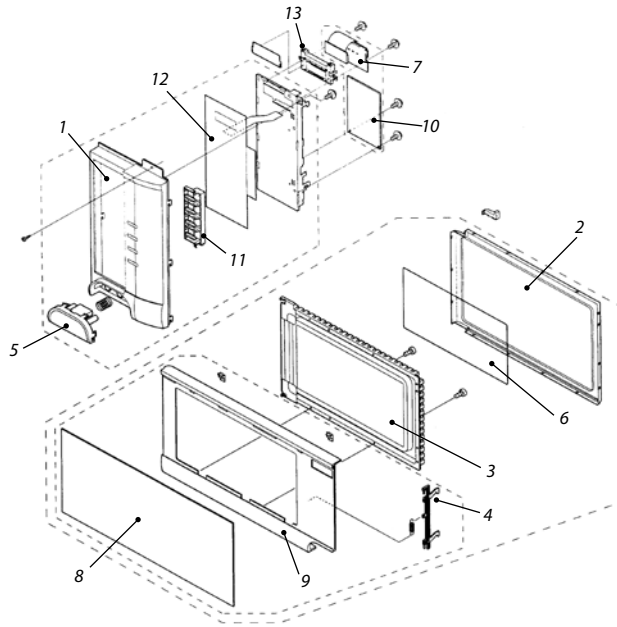

Does the food in a microwave oven cook from the inside out?

Contrary to popular belief, microwaved food does not cook from the inside out. Instead, the microwaves penetrate the first 1" to 1-1/2" of the food, and heat is then drawn to the center by conduction. The theory of food cooking from the inside out comes from the fact that because the air in the microwave is cool, heat dissipates off the surface of the food quickly.

# HIGH VOLTAGE CAPACITORS

All ERP capacitors are built with an internal bleeder resistor and will replace non-bleeder types. The bleeder resistor is a safety device built into the capacitor to discharge the capacitor when the unit is turned off. Capacitors rated at 2100V will replace capacitors rated up to 2500V when used in any home microwave (non-commercial) rated at 1,000 watts or less.

Available with 1/4" or 3/16" male terminals

## UNIVERSAL 2100V FOR DOMESTIC APPLICATIONS

**Universal High Voltage Capacitors with 1/4" male terminals** Each capacitor is equipped with four 1/4" male quick disconnect terminals. Case temperature rating 70°C. Rated at 2100V.

**Popular Direct Replacement High Voltage Capacitors with 3/16" male terminals** (depicted with a -1) Rated @2100V with 3/16" male quick disconnect terminals. Commonly used in Panasonic and Quasar microwaves. For values not shown, use our 1/4" terminal capacitors and our 13QBPADAPTR Adapter Kit.

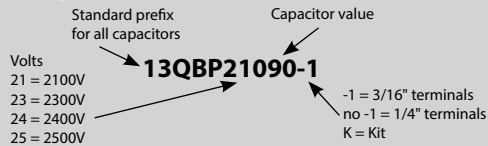

**High Voltage Capacitor Kits** (depicted with a K at the end of the part #) Replacement for Sanyo HV capacitors with internal diode (or without internal diode) and special mounting brackets. One kit replaces both base and side mount brackets. Reduces inventory. Available in four most common values.

## 2500V FOR COMMERCIAL APPLICATIONS

For commercial applications using 2500V capacitors.

Choose your capacitor nearest to your original value. Standard Mfg. tolerance is 6% ±3% (i.e. If you have .88 MFD capacitor use 13QBP21090 - .90MFD)

### FYI: Capacitors' nomenclature for ease of ordering

### Terminal Reducer Adapter Kit

Reduces 1/4" terminals to 3/16". Allows you to substitute universal 1/4" HV capacitors in Panasonic & other applications using 3/16" terminals. Eliminates the need to convert wire terminals.

# DIODES

## Order No. 11QBUNIV

Universal Diode Kit  
Length: 3-5/8"  
kV: 12 mA: 350

Stock this one diode and replace the majority of diodes commonly used. Diode uses two 1/4" female quick disconnect terminals. Just select correct terminal adapter and attach to correct side of diode.

**NOTE:** Due to the high resistance of a HV diode, it cannot be tested with just any V.O.M. The V.O.M. must be set on the highest resistance setting, and the V.O.M. must be an analog meter using a 9V battery or have an R x 10m scale. Digital meters reduce the 9V to operate the meter and cannot be used.

## Order No. 11QB0234

Length: 3-3/8" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring  
Non-banded= 3/16" female quick disconnect

Fits: GE, Panasonic, Quasar & many other brands

## Order No. 11QB0235

Length: 3-1/2" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring  
Non-banded= 1/4" male quick disconnect

Fits: Amana, Whirlpool & many other brands

Banded side Non-banded side

The silver band indicates the direction of current flow. Current flows from the non-banded side to the banded side.

## Order No. 11QB0236

Length: 3-1/2" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring  
Non-banded= 1/4" female quick disconnect

Fits: GE, Electrolux, Emerson & many other brands

## Order No. 11QB0237

Length: 3-5/16" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring  
Non-banded= 1/4" female quick disconnect wrapped in heat shrink tubing

Fits: GE, Goldstar, Maytag & many other brands

## Order No. 11QB0526

Length: 10-5/8" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring  
Non-banded= 2-1/4" female quick disconnect

Fits: Kenmore, Sanyo & many other brands

## Order No. 11QB0527

Length: 3-5/16" kV: 12 mA: 350  
Terminals:  
Banded side= 1/4" female quick disconnect  
Non-banded= 1/4" female flag quick disconnect

Fits: Whirlpool & many other brands

## Order No. 11QB0528

Length: 3-5/8" kV: 12 mA: 350  
Terminals:  
Banded side= 3/16" female quick disconnect  
Non-banded= 1/4" female quick disconnect

Fits: Electrolux, Whirlpool & many other brands

## Order No. 11QB0529

Length: 6" kV: 12 mA: 350  
Terminals:  
Banded side= #8 ring

Fits: Jenn-Air, Maytag & many other brands

## Order No. 11QB0530

Length: 12" kV: 12 mA: 350  
Terminals:  
Banded side = #8 ring  
Non-banded = 2-1/4" female quick disconnect on "Y" lead

Fits: GE, Goldstar, Electrolux, Kenmore, Sharp & many other brands

## Order No. 11QB0531

Length: 3" kV: 15 mA: 750  
Terminals:  
Banded side = 1/4" male quick disconnect  
Non-banded = 1/4" male quick disconnect

Fits: GE & many other brands

# FUSES

**Fast Blow** fuses are quick acting protectors for use in general circuit applications where high surges or transients are not anticipated.

**Slow Blow** fuses are generally used in circuits subject to high inrush currents or other transient surges. Microwave ovens fall in this category, although some manufacturers equip their units with fast blow fuses. As microwave ovens age, some degradation of components occur increasing current requirements. When older units, originally equipped with fast blow fuses experience nuisance interruptions, it is acceptable to replace with a slow blow fuse of the same amp rating.

**CFB:** ceramic fast blow      **BAF, BAN, FLM, NLM, SC:** midget fuse type  
**CSB:** ceramic slow blow

## WARNING! Electrical Shock Hazard

Even partial disassembly of a microwave oven can expose a dangerous electric shock and radiation hazard. Service of microwave ovens should be performed only by qualified service personnel.

**CAUTION:** While ERP components are engineered for a broad range of applications, it is the responsibility of the service technician to determine the suitability of a particular application by observing proper electrical and mechanical constraints. ERP shall not be held liable for any injury or damage arising from the misuse or misapplication of its products.

There are approximately five manufacturers of microwave oven magnetrons in the world, and most of these manufacturers are located in the Far East. Anyone manufacturing a microwave oven must purchase the magnetron from one of these manufacturers.

What this means is that many microwave manufacturers use the same or similar magnetrons and that many are interchangeable.

## Magnetron Identification is as easy as 1 - 2 - 3!

### 1) ELECTRICAL CHARACTERISTICS Match up kV Rating

The electrical characteristics of a magnetron cannot be determined without elaborate testing equipment or the manufacturer's spec sheets. Therefore, you must rely on the research done by us. Look for your industry # below to obtain your kV rating.

Industry #	kV	Industry #	kV	Industry #	kV	Industry #	kV	Industry #	kV	Industry #	kV
0M52	4.1	2M130	UC*	2M163	4.1	2M209	3.8	2M229	4.1	2M258	4.1

2M128	4.1	2M162	UC*	2M208	4.1	2M228	4.1	2M254	4.1	2M71	4.1

\*UC signifies an uncommon kV rating. Magnetrons with uncommon kV ratings cannot be replaced with standard magnetrons. See our model cross reference (on the website) for exact replacement magnetrons.

*PLEASE NOTE:* Use of the wrong kV rated magnetron will result in one or more of the following:

- 1) Magnetron will not go into oscillation,
- 2) Magnetron will not function properly or will overheat
- 3) Magnetron's life will be reduced substantially.

## 2) PHYSICAL CHARACTERISTICS Match up size, configuration, antenna height & bracket

### SIZE

Present-day magnetrons come in three different sizes. In most cases, you cannot replace a smaller one with a larger one due to allotted space.

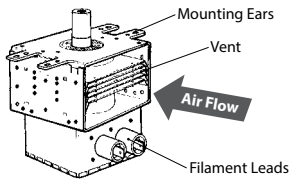

### CONFIGURATION

Configuration is the relationship between the mounting ears, the vents (airflow) and the filament leads. Manufacturers have designated letter codes for various configurations. The following are the four most popular configurations:

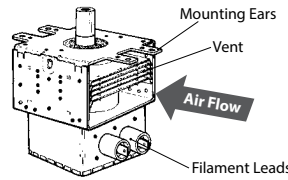

#### E CONFIGURATION

Mounting ears opposite vents and filament leads

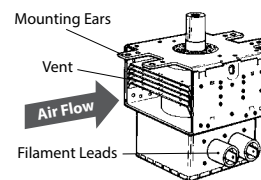

#### H CONFIGURATION

Vents and mounting ears in line with filament leads

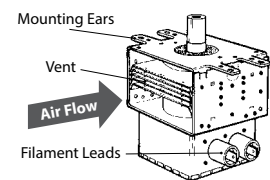

#### J CONFIGURATION

Vent and mounting ears opposite filament leads

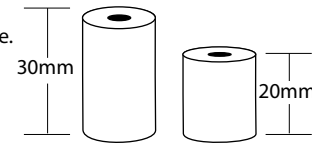

#### K CONFIGURATION

Mounting ears and filament leads opposite vents

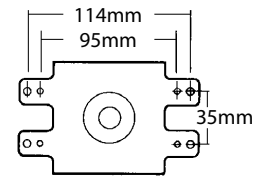

### ANTENNA HEIGHT

Many manufacturers are enlarging the cavity size without increasing the overall size of the microwave. They do this by reducing the size of the waveguide and shortening the antenna height.

### BRACKET

The most popular bracket is what we refer to as the standard bracket. It has two sets of mounting ears coming off of the opposite sides of the top plate of the magnetron with mounting holes spacing as shown. Some manufacturers are using other style mounting brackets which cannot be replaced with our universal type brackets. See pages 24 through 30 for correct replacement.

## 3) IDENTIFY PART NUMBER

Match the correct magnetron using the chart below of the most popular magnetrons with standard bracket.

kV	Watts	Size	Config.	Antenna	Part No.	Page
4.35	900-1000	Standard	E	30mm	10QBP1007	117

4.1	700-850	Compact	K	30mm	10QBP0228	120
3.8	500-650	Subcompact	H	30mm	10QBP0311	120
3.8	500-650	Subcompact	J	30mm	10QBP0315	120

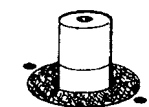

For magnetrons with special brackets and 20 mm antennas, see magnetron section on pages 24 - 30.

### IMPORTANT NOTES

- The shape of the antenna cover or the size of the hole in the cover does not affect the operation of the magnetron. 
- There are two standard ways manufacturers connect the filament leads. 
  - Fig. 1 Both leads housed in one insulating block
  - Fig. 2 Each lead housed in its own insulating block

In 99% of the applications, the filament leads consist of single wires with a 1/4" quick disconnect female terminal. Therefore, both styles are interchangeable. One percent of the time a plastic block is used, which houses both individual wires. If your replacement magnetron doesn't accept this block, remove the block and connect individual wires to the proper terminal, making certain terminals do not arc against the cabinet cover.

### CAUTION

When reinstalling a removed magnetron, for whatever reason, make certain woven metal RF gasket is properly seated at base of antenna.

## Magnetron Lookup by MODEL Number

Enter a model number in the search box on our X-REF page. When your model comes up, click on it. The magnetron and all other parts we presently have for that model will come up showing the ERP part number. Many will show a picture next to the listing.

If your model does not seem to be showing up in our cross reference, try entering just the beginning letter and/or number, then all models starting with those letters and/or numbers from our cross reference will appear.

## Magnetron Lookup by PART Number

Enter the OEM's part number, manufacturer's part number or ERP part number into the search box on our X-REF page. Our cross reference will start to search for available matches to your entry. It will return the ERP number that should be used to place an order.

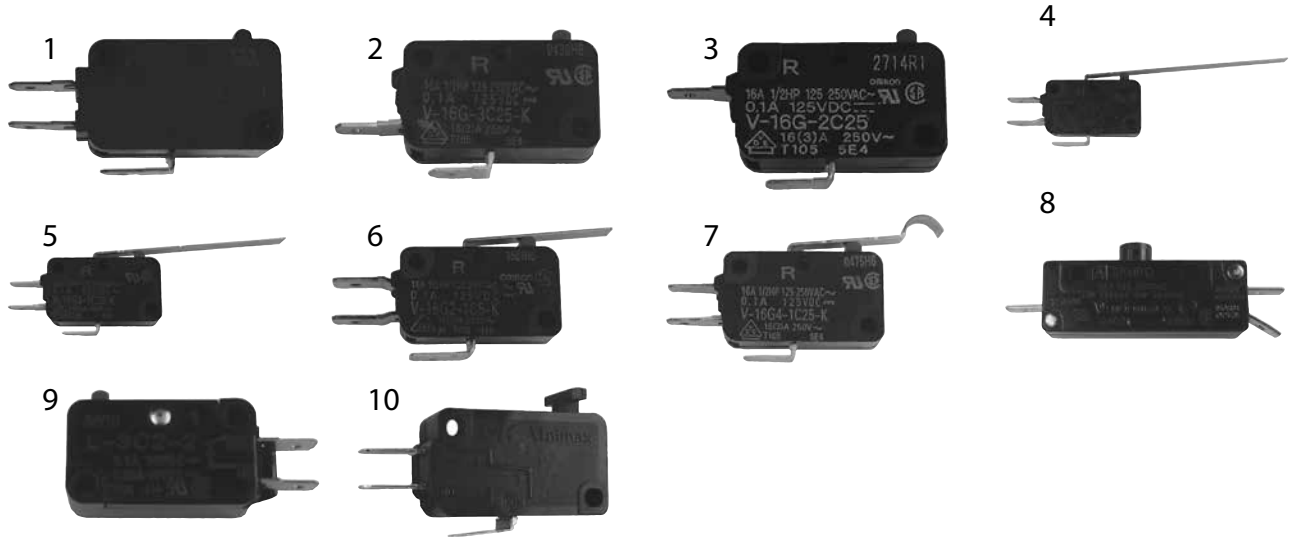

Here's an example of a manufacturer's part number

## Crimp Connectors

High temp - fits wire size #22-18AWG. Allows for easy replacement of thermal fuses. Eliminates heat problems when soldering thermal fuses. Just cut out thermal fuse leaving leads intact. Crimp in new thermal fuse with wire crimping tool.

Encased in electronically insulated case with 2 male spade terminals for easy field replacement. Rated 10 amp @ 250VAC, 15 amp @ 120VAC. Open temperature tolerance +0°, -4°C.

**Sold individually**

# TRANSFORMERS

## UNIVERSAL HV TRANSFORMERS

### Order No. 16QBP0293

Universal  
4.1 kV output (after doubling circuit)  
700-850 watts, 3.3 volt, 300mA  
Horizontal stack type  
3" H x 4-1/8" W x 3-7/8" D

Installation instructions (see wiring diagram on the next page)

1. Place transformer in position so that the label on top of the unit is correctly oriented and readable.
2. The two terminals located on the lower windings are the primary terminals for 120V line input.
3. The single terminal on the upper windings is the high voltage secondary terminal and is connected to the low side of the capacitor.
4. The flying lead located at the front of the unit is connected to the high side of the capacitor. The flying lead wire with the insulated terminal is connected to the "FA" terminal of the magnetron.

### Order No. 16QBP0296

Universal  
4.35 kV output (after doubling circuit)  
900-1000 watts, 3.2 volt, 350mA  
Horizontal stack type  
3-7/8" W x 5-1/4" D x 3-1/2" H

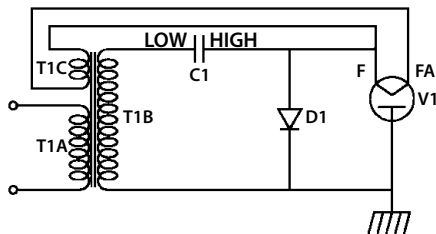

Installation instructions (see wiring diagram on the next page)

1. Place transformer in position so that the label on top of the unit is correctly oriented and readable.
2. The two terminals located on the lower windings are the primary terminals for 120V line input.
3. The single red wire off the backside of the upper windings is the high voltage secondary lead and is connected to the low side of the capacitor.
4. The two leads connected to the insulated terminal block are the filament leads and are connected to the filament terminal coming off of the magnetron. The single wire side is connected to the "FA" terminal. The flying lead coming out of the dual filament terminal block is connected to the high side of the capacitor (diode side).

# THERMOSTATS

Applications include hi-limit cutoff thermostats for magnetrons and also as oven cavity safety thermostats. On an old thermostat, "N" & "S" denote temperature in °C, "L" denotes temperature in °F.

## Order No. 26QB0106

### Inverter

Replaces **Panasonic**  
#A606Y6G00AP  
#F606Y6F00AP

**WARNING:** The inverter board looks like a regular printed circuit board, but is actually a high voltage/high current device. This PCB replaces the high voltage transformer, high voltage capacitor and high voltage diode used in ordinary microwaves. It supplies the approximate 4000V DC needed to put the magnetron into oscillation. As with all microwave parts, repairs should only be done by qualified technicians. Do not touch circuit even when off, high voltage current may remain in the circuit. Do not touch aluminum heat sink, it becomes extremely hot. Do not attempt to adjust or repair the inverter board. Only replace it by following the manufacturer's recommended instructions.

# POWER STARTS

## POWER STARTS

### ERP's Power Starts for Refrigerators and Freezers

Designed for Refrigerators and Freezers, ERP's Power Start design replaces the relay, overload and start capacitor in one easy low cost package. Solid state current sensitive overload and PTC (Positive Temperature Coefficient) design offers universality, reliability, and proven performance. Additional boost applies safely to good systems or helps tired systems last longer. Easy mounting with either clip or screw.

#### Order No. ERP410

### Universal Hot Surface Ignition Module

- Flame status & diagnostic LED indicator for accurate troubleshooting
- Multi-position DIP switch allowing a broad range of field programmable timing selections
- Timing selections are transferred to permanent memory after ten normal heating cycles are completed

Replaces Honeywell #S8610U1000 & many others

## Order No. ER1003

### Universal Intermittent Spark Ignition Module

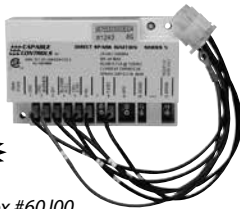

24VAC 50/60 Hz  
Prepurge: 1 sec.  
90 sec. trial, 5 min. retry

Replaces Honeywell #S8610U1003  
Also replaces popular modules made by Camstat, Fenwal, HSC, Penn Johnson & Robertshaw

Universal Adjustable Furnace Filter

- Two-phase electrostatic filter system traps dust, mold spores, animal dander and pollen
- Traps over 90% of particles ranging from 0.245 to 80 microns
- Laboratory tested and guaranteed
- Fully adjustable to fit standard sizes from 14" x 20" to 20" x 25", 1" thick

**5 Year Warranty**

**Electrostatic High Efficiency Washable Filter**

Order No. EP2002 24" x 12" - 18"

Order No. EP2003 25" x 12" - 20"

Order No. EP2004 16" x 20" - 32"

### Expand-A-Pleat Expandable Furnace Filter

- No assembly required, low pressure drop
- Electrostatically charged, removes pet dander
- Material - MERV 8, made in the USA
- Captures airborne allergens & particulates

Adjustable frame easily slides to fit central air system without using scissors or other tools

Each filter is clearly printed to make it easy to find desired size

Expanded metal supports each pleat and ensures the filter maintains its shape even in high velocity central air systems

Locking tab slides into place to securely hold the filter at selected size.

## SUPER SEAL

For professional use only: Always wear safety glasses and protective gloves. Use in compliance with the Montreal Protocol and Regional or Federal laws for the handling of refrigerant.

### Seals leaks from the inside out!

When you can't find the leak, Super Seal repairs leaks quickly, easily and permanently. Service techs save time & money on the first call without repeat calls.

- Compatible with all oils and refrigerants.
- Effective in sealing multiple leaks
- Hose and valve included with each product.
- Ideal for preventative maintenance too
- Vacuum packed can
- No flammable Hydro Carbons

Super Seal reacts with the present atmospheric moisture. As refrigerant starts to leak out, it lowers the ambient air down to the dew point. When this happens, little droplets of moisture appear around the leak area. When the sealant meets the moisture, it forms a low tensile crystalline structure that prevents further leakage. Super Seal is designed to seal leaks 300 microns or smaller.

**Order No. 944KIT** 1 unit  
**Order No. 944DIS** 8 units  
**Order No. 944CS** 12 units

#### Super Seal HVACR

- Repairs leaks in refrigerant units utilizing more than 4 lbs. of refrigerant
- Good for most residential systems
- 1-1/2 ton up to 5 ton (min. of 30 oz. of oil required)
- Will not clog the valve core when injected into the system
- Will not harm the compressor, windings or other components
- Won't interfere with compressor functions, valves, form wax or impede the lubrication ability of the system
- Compatible with all refrigerants & oils including 410a

**Order No. 947KIT** 1 unit  
**Order No. 947DIS** 8 units  
**Order No. 947CS** 12 units

#### Super Seal ACR

- Repairs leaks in refrigerant units utilizing less than 4 lbs. of refrigerant
- Good for smaller systems
- 230 BTUH up to 18000 BTUH (1-1/2 ton) (min. of 10 oz. of oil required)
- Will not clog the valve core when injected into the system
- Will not harm the compressor, windings or other components
- Won't interfere with compressor functions, valves, form wax or impede the lubrication ability of the system
- Compatible with all refrigerants & oils including 410a

**Order No. 946KIT** 1 unit  
**Order No. 946CS** 12 units

#### Super Seal Automotive

- Easily installed in minutes
- Professional strength formulation
- Permanently seals leaks in evaporators & condensers
- Effective in sealing multiple leaks
- Continues to circulate in the A/C system to prevent future leaks
- Contains no red dye
- Saves time, money & the environment from harmful emissions

**Order No. 973KIT**

#### ACR system application guidelines

- 230 BTUH / 0.067 KW to 18,000 BTUH / 5.3 KW: one can of Dry R
- 1.5 ton / 5.3 KW up to 5 ton / 17.6 KW: one can of Dry R (for micro leaks, add one can of Super Seal HVAC)

#### Dry R

- Eliminates moisture by pulling apart the H<sup>2</sup>O molecule and creates a stable environment
- Increases drier efficiency by turning yellow when moisture is present in the line, and back to green when the line is dry in 24 hours
- Prevents the formation of acid, as acid cannot form without moisture
- Can be used during or after maintenance is performed
- Excellent oil conditioner
- Can use with all Cliplight sealants (including sealants)
- Increases lifespan of AC/R units

## SUPER SEAL

### Order No. 979KIT

#### ACR system application guidelines

- 230 BTUH / 0.067 KW to 18,000 BTUH / 5.3 KW: one can of Dry R / for micro leaks add one can of Super Seal ACR
- 1.5 ton / 5.3 KW up to 5 ton / 17.6 KW: one can of Dry R / for micro leaks add one can of Super Seal ACR
- 5 ton / 17.8 KW and over: two cans of Dry R / for micro leaks add one can of Super Seal commercial

#### Super Seal Ultra Pack

- Dry and seal your system
- One kit will dry and seal A/C systems 1.5 ton up to 5 ton
- Remains stable over the life cycle of unit
- Installs in three easy steps...
  1. Install Dry R using direction provided
  2. Shut off unit and keep hose for step 3
  3. Install Super Seal using directions provided
- Both are compatible with CFC, HFC, & HCFC refrigerants and refrigeration oil
- Increases both efficiency and life span of AC/R unit
- Non corrosive, environmentally friendly, easy to use

### Order No. 971KIT *use on small systems*

### Order No. 972KIT *use on residential and/or commercial systems*

#### ACR system application guidelines

- 230 BTUH / 0.067 KW to 18,000 BTUH / 5.3 KW: one can of Super Seal Total 1
- 1.5 ton / 5.3 KW up to 5 ton / 17.6 KW: one can of Super Seal Total 2
- 5 ton / 17.8 KW and over: two cans of Super Seal Total 2

#### Super Seal Total 1 (971KIT)

#### Super Seal Total 2 (972KIT)

- For preventative maintenance
- Proactive- use before you have a leak
- Contains Super Seal Classic, Dry R and an Ultra Violet (UV) tracer dye
- Eliminate moisture and prevents acid formation
- Helps find larger leaks with use of UV tracer dye
- Compatible with all refrigerants and oils
- Remains stable over the life cycle of the unit
- Non corrosive and environmentally friendly

### Order No. WRAC

#### Universal Electrostatic Filter

- Trims to fit ALL window air conditioners up to 15" x 24"
  - Keeps air filtered and fresher
  - Washable & reusable
  - Last 3 years
- Replaces ALL9915*

### Order No. CC75

*Connects 3/4" Sch. 40, CPVC or 3/4" & 1" copper*

#### Condensate Drain Pipe Connector

- Fast & easy installation of condensate lines
- Ideal for units that use 3/4" or 1" PVC, CPVC or copper drain pipes
- 2-3/8" high
- Not for use in pressure or potable water applications

### Order No. EN1521 *12-15" H x 18-21" W*

### Order No. EN1725 *15-17" H x 22-25" W*

### Order No. EN2028 *18-20" H x 26-28" W*

#### Indoor Air Conditioner Cover

- Fits over your air conditioner on the inside to stop cold drafts
- Machine washable
- Small, medium & large sizes
- Made in the USA

### Order No. 0043 *(02140)*
